Not the best choice for you

Test Automation Engineer

Data Scientist

Back-End Software Engineer

A Back-End Developer is responsible for all the "internal magic" of developing and maintaining a product's core functional logic and features. Such a specialist has an excellent knowledge of C++, C#, Java or another high-level programming language. They work directly with the program code and focus on how it will work – not how it will look.

Their primary responsibility is ensuring that the services requested by the front-end system are performed correctly at the software level.

Personal traits that will help you succeed:

- Discipline
- Perseverance and persistence
- Collectivism and ability to compromise
- Self-organization and logical thinking
- Attention to details and social intelligence
- Ability to comply with norms and follow rules

Choose this direction if you:

- Are good at logical thinking and have an analytical mindset
- Strive to write clean & understandable code and spend your free time working on pet projects
- Are a lifelong learner willing to spend a significant amount of time honing your technical skills
- Know English well enough to read technical documentation and maintain a conversation on simple topics

Psychological portrait

Find your psychological type that determines how you perceive and react to the world. You will see the main and additional types if the quiz couldn't interpret your answers unambiguously.

Character traits

You are confident, tenacious, and persistent in achieving your goals. Only one person can convince you of something — yourself. In difficult situations, you do not lose faith in yourself or your own strengths and experience. Conservative, you are a supporter of strict guidelines and rules. In a leadership role, you are more of a tsar than a president — democracy ends where your area of responsibility begins. Not only can you be generally relied on, you will be a great support and, in difficult times, you will do the right thing. Your approach in life does not change, no matter what happens around you. Negative qualities include aggressiveness and hostility to anything not included in your well-established ideas. Sometimes, you come across like a dictator; insisting that you know what is good and what is bad, and resisting anything that contradicts your ideas about the world.

Specialties that are right for you

Good options for you: manager; financier; tester; chief engineer; lawyer; law enforcement; positions for which critical thinking is required, or which feature a clearly established structure and hierarchy.

Hobbies or leisure activities you will enjoy

Sports and recreation related to physical activity, coaching. Activities that require perseverance and an aggressive approach. Pastimes you consider appropriate to your traditions and habits.

Your unconscious yearning

Maintaining the status quo by aggressively defending the familiar.

psychotype 56%

Your accuracy is fantastic. Everything is clear, everything is logical. Nothing superfluous, nothing missing. Everything that you use in your work is reliable, verified, tried, and tested. Your job is not just a task to you, it is more like a calling, and you are loyal to it.

way to learn: Orientation to solving practical problems, preferably related to practical applications. Has difficultly moving away from the established scheme or template, slowly adjusts to new things that do not fit into the scheme. Learning should be based on the gradual joining of the new to the habitual, as well as repetition

Probability of strong psychological reactions

Low probability of deviation from the norm

- · Internal emotional state
- Internal conflict and emotional tension
- · Difficulty with self-control
- · Aggressive reaction to stress
- The risk of becoming cynical about life, others, and work
- Risk of psycho-emotional exhaustion
- Risk of a psycho-emotional outburst in a stressful situation
- Sustainable anxious state
- · Sustainable low self-esteem
- Isolation, unwillingness to communicate with others
- · Risk of depression
- · Risk of professional burnout

Probability of deviation from the norm, we recommend paying attention

· Risk of hostility and becoming conflict
